also without screws

Adjustable retractable  
mesh screen

Retractable brush with  
total disappearance

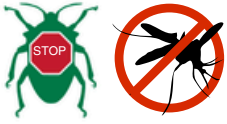

New generation  
CLIC-CLAK® hook-  
release system

Telescopic and self-  
adjusting guides

## GOODBYE TO MOSQUITOS AND UNWANTED INSECTS!

Do mosquito's, flies and cockroaches invade your home? Clearline finally has the answer for you!

Estetika by Clearline, is an innovative flyscreen in every aspect: aesthetic concept, functionality and practical installation. Estetika® a true barrier against these very annoying insects. But that's not all. Installation is simple and fast and can even be performed without the use of screws. Additionally, newly designed profiles ensure a "full frame" finish of high aesthetic value, further enhanced by brushes and small covers that "disappear" inside the aluminum profiles. Self-adjusting telescopic guides and the famous Clic-clak® provides the perfect solution. Estetika®'s by Clearline offers a state-of-the-art mosquito net.

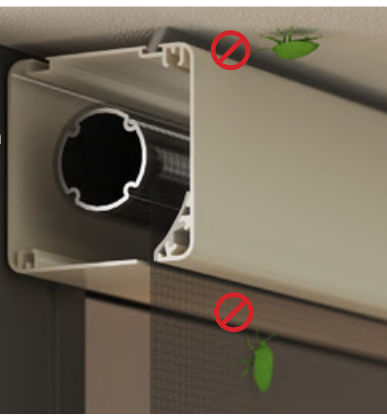

# MAIN FOCUS

Patented  
Technology

## ANTIMOLECULAR TECHNOLOGY

Profiles and plastics have been designed to offer an effective barrier against annoying mosquito's and insects that easily enter homes. Estetika® by Clearline has been designed to eliminate all possible entry routes. Keeping insects out.

## DESIGN A FULL FRAME

Essential and clean lines combined with a guide as wide as the box to ensure a perfect "full frame" finish around the opening: the wide guide eliminates the unsightly gap that usually forms between the guide and the frame, a space that is difficult to clean.

## SELF-RECORDING TELESCOPIC GUIDES

Thanks to its telescopic profiles and the standard upper brush, Estetika® by Clearline also fits the most irregular compartments without the addition of spacers, silicone, or various seals. The guides adapt and self-adjust easily whenever the handlebar is lowered.

## INSTALLATION WITHOUT SCREWS

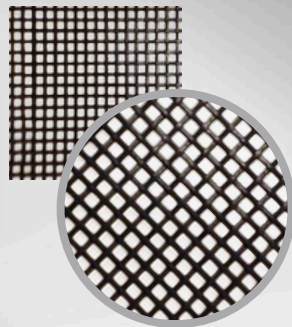

(between window frame and shutter/blind)

Installation in a hole even without screws thanks to the combination of the thrust group and double-sided tape provided. With this system it is possible to correct misalignments which can be up to 10 mm.

## BLACK VEIL NET

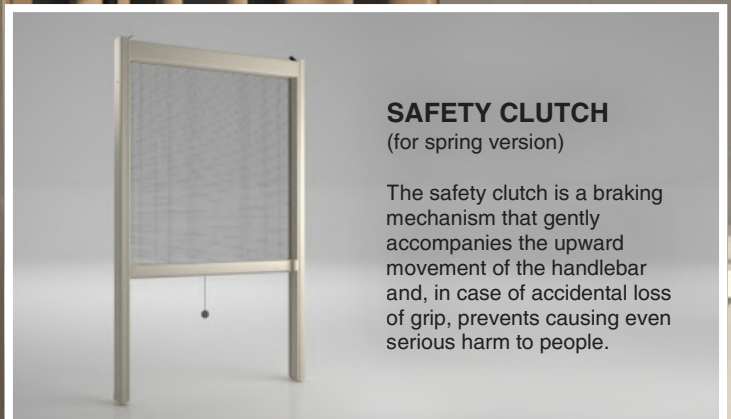

Evolution of the classic net, more resistant and high-performing. It protects against damage caused by sunlight thanks to a slight shading effect, which gives it a GTOT of 0.34 if placed outside a C glass, making your mosquito net a sun protection and therefore qualifying for tax deductions for building energy retrofitting.

## SAFETY CLUTCH

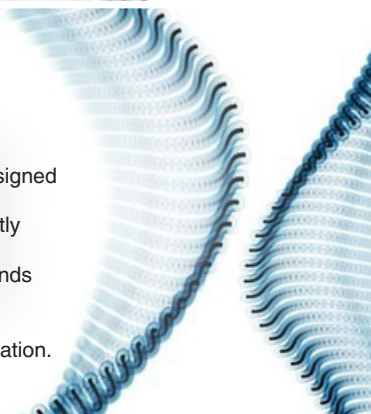

(for spring version)

The safety clutch is a braking mechanism that gently accompanies the upward movement of the handlebar and, in case of accidental loss of grip, prevents causing even serious harm to people.

## WIND RESISTANCE

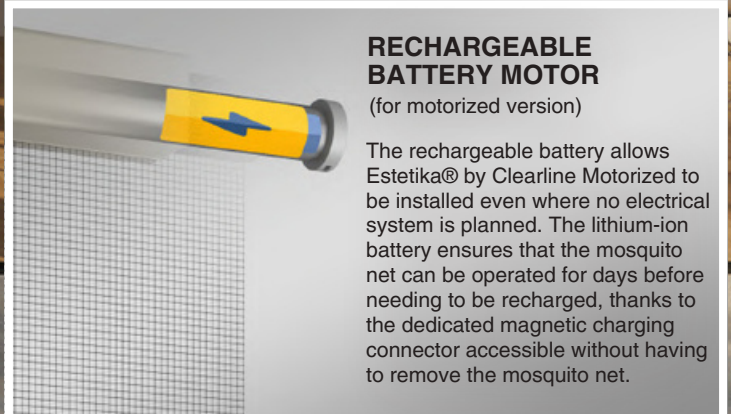

Class 6 with ANIMA21®, the patented windproof system designed to make mosquito nets super resistant. ANIMA21® intelligently combines aesthetics and functionality because it withstands pressure while allowing the automatic retraction of the net, ensuring its durability and operation.

## RECHARGEABLE BATTERY MOTOR

(for motorized version)

The rechargeable battery allows Estetika® by Clearline Motorized to be installed even where no electrical system is planned. The lithium-ion battery ensures that the mosquito net can be operated for days before needing to be recharged, thanks to the dedicated magnetic charging connector accessible without having to remove the mosquito net.
